

THE OPEN UNIVERSITY OF SRI LANKA
BACHELOR OF MANAGEMENT STUDIES DEGREE (BMS) PROGRAMME
LEVEL 5
FINAL EXAMINATION – 2011
FINANCIAL MANAGEMENT AND MANAGERIAL ACCOUNTING – MCU 3208
DURATION : THREE (03) HOURS

00084

DATE: 23rd February 2011

TIME: 9.30 am – 12.30 pm

Instructions: (I) Answer only FIVE (05) Questions selecting any TWO (02) from PART A and any THREE (03) from part B.
(II) Use of a non-programmable calculator is allowed.

PART - A

- (1) "As a member of the management team the Management Accountant has to play a responsible role to achieve the organization's objectives'. Discuss. (20 marks)
- (2) (i) Briefly explain how managers could use the Break Even Point analysis for their decision making. (8 marks)
- (ii) X Ltd. manufactures a single product which is being sold at Rs.300/- each. The material costs for each unit are Rs. 64/-. The products are handmade. It takes three direct labour hours to make one unit. X Ltd. pays its workers Rs. 42/= per hour. Budgeted fixed costs are Rs. 165,000/= per month. The estimated demand of the product is 3250 units per month.
- You are required to compute,
- a) The variable cost per unit
 - b) The contribution per unit
 - c) The breakeven output per month
 - d) Margin of safety in units
 - e) The output required to achieve a profit of Rs. 82,500/= per month
- (12 marks)
- (3) (i) "If a product line is making a loss, then that's a pretty good evidence that the product line should be discontinued' Do you agree? Explain. (8 marks)
- (ii) ABC Ltd. annually makes 30,000 units of a certain sub assembly part used in its manufacturing process. The unit product cost of this particular part is computed as follows.

	Rs.
Direct Materials	15.70
Direct Labour	17.50
Variable manufacturing overhead	2.30
Fixed manufacturing overhead	<u>16.80</u>
	52.30

A supplier has offered to sell the company all of these parts it needs at Rs. 51.90 per unit. However, 50% of fixed overhead cost being applied to this part would continue even if the part were purchased from the supplier. This fixed overhead cost would apply to the company's remaining products. If the company accepts this offer, the facilities now being used to make the particular part could be used to make more units of the finished product that is in high demand. The additional contribution margin of this would be Rs. 219,000 per year.

- a) How much of the unit product cost of 52.30 for the assembly part is relevant when arriving at the decision 'to manufacture' or 'to buy'?
- b) What is the net total gain or loss of purchasing the sub assembly part rather than manufacturing it within the company?
- c) What is the maximum amount the company should be willing to pay an outside supplier per unit for the part, if the supplier commits to supplying all 30,000 units required each year?
- d) What other factors should be considered when making the decision to manufacture or to buy?

(12 marks)

PART - B

- (04) i) How does the "modern" finance manager differ from a "traditional" finance manager? Explain. (10 marks)
- ii) What are the limitations in using of profit maximization objective of the firm? How does the objective of 'maximization of shareholders wealth' deal with such limitations? (10 marks)
- (05) I) a) Explain the reasons for time preference for money. (05 marks)
- b) XY Company Ltd. wants to purchase a machine which costs Rs. 10 million. For this purpose the company borrows Rs.10 million to be repaid in four equal installments at the end of each of the next four years. If the interest rate is 12% on the outstanding amount of the loan, calculate the value of a installment? (05 marks)
- II) The ordinary shares of NCP Ltd. paid Rs. 1.32 as dividends during the past year. Dividends are expected to grow annually at a rate of 8%, indefinitely.
- a) If NCP's current market price is Rs. 23.50, what is the expected rate of return? (04 marks)
 - b) If your required rate of return is 10.5% what should be the value of a share for you? (04 marks)
 - c) Should you make the investment? Explain. (02 marks)

- (06) I. a) Briefly explain
 I. Portfolio Return
 II. Portfolio risk
 (04 marks)
- b) Explain significance of correlation coefficient in portfolio selection.
 (04 marks)

II. Two securities, P and Q have the following expected return $E(R)$ and standard deviation.(SD)

	P	Q
E(R)	14	9
S.D	20	30

The expected correlation between P and Q is 0.1

Compute the return and risk for each of the following portfolios.

- a) 100 % of security P
 b) 100 % of security Q
 c) 60 % of security P and 40% of security Q
 d) 50% of security P and 50% of security Q
 e) Based on your calculations explain how diversification reduces the risk of the investment.

(12 marks)

- (07) I. a) Discuss the risk-return relationship that relates to working capital management.
 (5 marks)
- b) Explain the differences between permanent and temporary working capital.
 (5 marks)

II. The credit manager of a company has recommended that the company's credit terms should be changed to offer 3% discount to customers who settles their account within 10 days of the date of invoice, otherwise net 30 days. This will have the following effects.

- Sales increases from 1.5 million to 1.6 million.
- Bad debts decrease from 2% to 1% of all sales.
- Average collection period reduces from 60 days to 20 days.
- 100% of customers take advantage of the proposed cash discount.
- Administration cost reduces by Rs. 20,000/= per annum.

Determine the net benefits of offering proposed discount. Assume that the company's cost of capital is 10% and its contribution to sales ratio is 20%.

(10 marks)
