THE OPEN UNIVERSITY OF SRI LANKA

B.Sc./B.Ed. DEGREE PROGRAMME – 2007/2008

BOTANY – LEVEL 04

BTU 2201/BTE 4201 – PLANT PHYSIOLOGY

ASSESSMENT TEST III – (NO BOOK TEST)

**DURATION: ONE (01) HOUR** 

DATE: 26<sup>th</sup> April 2008

## ANSWER ALL QUESTIONS

|   | (a) | Growth and development is a result of three simple events at the cellular level, cell division         |
|---|-----|--|
|   |     | and and  |
|   | (b) | In most plants, auxin is synthesized from amino acid   |
|   | (c) | The hormone that triggers mobilization of stored food in germinating cereal grains is                  |
|   | (d) | Gibberellins were first discovered in fungal extracts of   |
|   | (e) | Cytokinins are derivatives apical  |
|   |     | meristems are the major sites of synthesis of cytokinins.  |
|   | (f) | Ethelene is released by plants as a and affects of fruits and leaf drop.                               |
|   | (g) | A response in which a plant organ curves in a certain direction due to differential growth is called a |
| ( | (h) | The active form of phytochrome is and it is formed when  |
|   |     | light is absorbed.   |
| ( | (i) | Plants that grow in high salt soils are known as   |
| ( | j)  | is the response of plant organs to gravity.  |
| ( | (k) | Abnormal growth termed "triple response" in seedlings is caused by the hormone                         |
| ( | 1)  | Asymmetric distribution of causes differential growth reaction in phototropism and geotropism          |

|     | (m)        | Plants which flower after a period of vegetative growth, regardless of the |  |  |
|-----|------------|--|--|--|
|     |            | photoperiod are known asplants.  |  |  |
|     | (n)        | Induction of flowering by a treatment is called                            |  |  |
|     |            | vernalization.   |  |  |
|     | (o)        | Photoperiod is detected by the of a plant and information                  |  |  |
|     |            | about it is sent to floral buds, perhaps by an unidentified hormone        |  |  |
|     |            | tentatively termed   |  |  |
|     |            |  |  |  |
| 02. | State      | whether the following statements are <u>true</u> or <u>false</u> .         |  |  |
|     | (a)        | Leaves and stems exhibit positive phototropism.                            |  |  |
|     | <b>(b)</b> | Statolith theory explains how the gravitational                            |  |  |
|     |            | stimulus can be perceived by a plant.                                      |  |  |
|     | (c)        | Both auxins and gibberellins cause cell                                    |  |  |
|     |            | elongation.  |  |  |
|     | (d)        | The downward curvature of leaves that occurs                               |  |  |
|     |            | when the upper side of the petiole grows faster                            |  |  |
|     |            | than the lower side is called thigmonasty.                                 |  |  |
|     | (e)        | Carrot and cabbage plants with a rosette type of                           |  |  |
|     |            | growth can be made to bolt and flower by                                   |  |  |
|     |            | treating with the hormone abscisic acid.                                   |  |  |
|     | (f)        | A synthetic auxin 2, 4 D is used as a selective                            |  |  |
|     |            | herbicide.   |  |  |
|     | (g)        | Abscisic acid is also known as the "stress                                 |  |  |
|     |            | hormone".  |  |  |
|     | (h)        | When a detached leaf is floated in water                                   |  |  |
|     |            | containing cytokinin, leaf will turn yellow due to                         |  |  |
|     | •          | the breakdown of chlorophyll.  |  |  |
|     | (i)        | GA is used in germination of barley grains in                              |  |  |
|     |            | malting during beer manufacture.   |  |  |
|     | (j)        | Coconut water causes plant tissues to undergo                              |  |  |
|     |            | cell division due to the presence of cytokinin                             |  |  |

| 03. | (a) | What is the possible explanation for apical dominance?               |
|-----|-----|--|
|     |     |  |
|     |     |  |
|     |     |  |
|     |     |  |
|     | (b) | Why do auxins inhibit the growth of lateral buds but not that of the |
|     |     | terminal bud that produces it?                                       |
|     |     |  |
|     |     |  |
|     |     |  |
|     | (c) | List five (05) functions of auxins in plants.                        |
|     |     | i  |
|     |     | ii   |
|     |     | iii  |
|     |     | iv   |
|     |     | V  |
|     | (d) | What is parthenocarpic fruit development? Give two (2) hormones      |
|     | , , | which regulate parthenocarpic fruit development.                     |
|     |     |  |
|     |     |  |
|     |     |  |
|     |     |  |
|     | (e) | Give two 02 commercial uses of auxins.                               |
|     |     |  |
|     |     |  |

|---|---|--|
| Mult  | tiple ch  | oice questions.  |
| Und   | erline t  | he most appropriate answer.  |
| 01. Which one of the following statements about plant hormones is t |   | ch one of the following statements about plant hormones is false?    |
|   | a)  | Abscisic acid generally promotes growth.                             |
|   | b)  | Gibberellins promote cell elongation.                                |
|   | c)  | Cytokinins promote cell division.                                    |
|   | d)  | Ethylene contributes to the aging of plants.                         |
| 02.   | Axiliary buds near the base of shoot may grow faster than axiliary buds near shoot apex because they are, |  |
|   | a)  | close to a cytokinin source  |
|   | b)  | further away from an auxin source                                    |
|   | c)  | both (a) and (b)   |
|   | d)  | further away from an abscisic acid source.                           |
| 03.   | 3. Auxin in plants are known to affect all of the following phenomena except                              |  |
|   | a)  | geotropism of roots  |
|   | b)  | maintenance of dormancy  |
|   | c)  | inhibition of lateral buds   |
|   | d)  | development of fruits.   |
| 04. According to modern ideas about phototropism in plants          |   | rding to modern ideas about phototropism in plants                   |
|   | a)  | light causes auxin to accumulate on the shaded side of a plant stem. |
|   | b)  | auxin stimulates elongation of plant stem cells.                     |
|   | c)  | auxin is produced by the tip of the coleoptile and moves downward.   |
|   | d)  | all of the above are correct.  |
|   |   | 5  |

| 05.  | When growing plant tissues in culture, auxin is used to stimulate cell enlargement? |  |  |
|--|---|--|--|
|  | a)  | Ethylene   |  |
|  | b)  | Gibberellin  |  |
|  | c)  | Cytokinin  |  |
|  | d)  | Abscisic acid  |  |
| 06.  | A fla   | ash of white light given during the middle of the night to a short day plant will  |  |
|  | a)  | cause increased flower production  |  |
|  | b)  | have no effect on flowering  |  |
|  | c)  | inhibit flowering  |  |
|  | d)  | stimulate flowering  |  |
| 07.  | Punching off of the tips of many plants cause them to branch because                |  |  |
|  | a)  | apical dominance has been disrupted  |  |
|  | b)  | most of the auxin in these plants is produced in the growing tips and auxin normally inhibit branching.                                    |  |
|  | c)  | the growing tip uses up all the auxin produced and when the tips are removed, there is enough auxin to stimulate lateral branch formation. |  |
|  | d)  | Two of the above are correct.  |  |
| O8. Spraying fruits with cytokinins to keep then may help counteract the effect of |   | ying fruits with cytokinins to keep then for a longer period after harvesting help counteract the effect of                                |  |
|  | a)  | abscisic acid  |  |
|  | b)  | ethylene   |  |
|  | c)  | auxin  |  |
|  | d)  | gibberellin  |  |
|  |   | 6  |  |

CE CHARAGE TO SEE TO SE

- a) gibberellins
- b) auxins
- c) abscisic acid
- d) cytokinins

## 10. Which of the following statements is <u>incorrect</u>?

- a) Nastic movements are growth movements that occur independently of the direction of the stimulus.
- b) Nastic movements are not permanent.
- c) Nastic movements involve temporary variations in position which are reversible.
- d) Twining of tendrils of plants is an example of nastic movements
