

THE OPEN UNIVERSITY OF SRI LANKA

B.Sc. DEGREE PROGRAMME

BOTANY- LEVEL 05

BOU3101/ BOE5101 – PLANT PATHOLOGY

ASSESSMENT TEST I (OPEN BOOK TEST)

DURATION: ONE (01) HOUR

Date: 30th April 2017

Time: 10.30-11.30 am

Registration No:

Answer ALL questions in the space provided.

I Give the most appropriate term/ terms for the following:

1. Symptoms characteristically causing rapid death of entire leaves including veins or parts of the leaf -

.....

2. Projections of hyphae into host cells which acts as an absorbing organ -

.....

3. The ability of a pathogen to cause disease -

.....

4. A pathogen which causes little or no disease after infecting it's host –

.....

5. Failure of plants or plant organs to develop fully due to the reduction in the size of plant cells -

.....

6. Part of a pathogen which is capable of initiating a new infection –
.....
7. Progressive increase in the incidence or occurrence of a particular disease within a definite population at a particular time –
.....
8. A plant which is infected with a virus and carries the virus but , does not show any symptom -
.....
9. Abiotic diseases caused by inanimate agents –
.....
10. When all growth stages of a cultivar exhibit resistance to a pathogen; often oligogenic -
.....
11. A fungicide which is taken in, and translocated within the plant –
.....
12. Control of import and export of plants to prevent spread of diseases and pests –
.....
13. The swollen tip of the hyphae or the germ tube –
.....
14. Symptom caused due to loss of turgor in plant tissues –
.....
15. A pathogen which obtains it's nutrients only from living host cells –
.....

16. A genus of plant pathogenic bacteria that has a gram- positive rod shaped structures

.....

17. A type of nematode that enters the host plant tissue and feed on these cells –

.....

18. The chain of events associated with the interactions among the pathogen, the host and the environment –

.....

19. Pleomorphic, prokaryotic microorganisms that lack a cell wall and cause yellows diseases in plants –

.....

20. Enzymes that break down cellulose –

.....

(20 x 2 marks)

II Differentiate between the following

1. Host specific toxins and host non- specific toxins

.....
.....
.....
.....
.....

2. Monocyclic diseases and polycyclic diseases

.....

.....

.....

.....

.....

3. Stylet-borne viruses and circulative viruses

.....

.....

.....

.....

.....

4. Endoparasitic development and ectoparasitic development

.....

.....

.....

.....

.....

5. Resistance and susceptibility

.....

.....

.....

.....

.....

6. Alternative host and alternate host

.....

.....

.....

.....

.....

(6 x 5 marks)

III. Give a brief account of the following :

1. The functions of the cork layer as an induced structural barrier

.....

.....

.....

.....

.....

2. Two mechanisms adopted by the fungal spores to get into the moving current of air during the dispersal

.....

.....

.....

.....

.....

3. The **basic steps** involved in the process of fungal spores germination

.....

.....

.....

.....

.....

.....

4. The two main functions carried out by cell wall degrading enzymes during disease development

.....

.....

.....

.....

.....

5. The effect of the pathogens on the process of plant photosynthesis during an infection

.....

.....

.....

.....

.....

.....

(5 x 6 marks)
